

CERAMIC ION STYLING IRON INSTRUCTIONS

Paul Brown Hawaii Ceramic Ion Thermal Flat Irons are manufactured for maximum style options and superior hair conditioning when used properly. Please take a moment to review these simple procedures to insure safe and long lasting use.

Press (-) to turn on Iron and press + to reach desired temperature, to decrease temperature press (-) briefly until lower temperature is reached. To turn iron off press (-) and hold for 1.5 seconds

The Paul Brown Hawaii Ceramic Ion Thermal Flat Irons feature Far Infrared Heating from Ceramic Heaters, using the Ceramic Coated Paddles to protect hair color and hair condition. The rapid heating benefit allows the unit to be turned OFF between users, saving electricity and should NEVER be left on when not in use. Use the convenient “on/off” switch in the temperature control for On/Off functions during the day and between uses. For safety the unit should be unplugged overnight or when not in daily use.

Paul Brown Hawaii Ceramic Ion Thermal Flat Irons have an adjustable thermostat control to set the proper temperature for various hair conditions and textures. For chemically treated, fine or damaged hair, use a lower heat styles. These professional salon irons develop extreme heat, especially on higher temperature settings, so CAUTION should be exercised at all times.

AVOID any contact with skin! Always keep out of reach of children and away from water at all times. Due to the temperature created when in use, NEVER wrap the cord around the paddles until the entire unit has cooled off.

DO NOT set the iron on delicate cabinet surfaces or near any flammable materials. Burning the cord while wrapping it around the heated paddles or damage to the iron from getting it wet will VOID the warranty.

To periodically clean product residue from the paddles, be sure the iron is unplugged and cool to the touch. Clean the paddles with a soft cloth and alcohol or glass cleaner to protect the ceramic coating. Never scratch or file the paddles with hard implements as this may scratch the ceramic coating and reduce the slide and shine feature of the ceramic paddles. Like any fine electronic apparatus, avoid dropping the iron, and untangle the cord whenever twisted.

NOTE: Paul Brown Hawaii Ceramic Ion Thermal Flat Irons are warranted for a period of ONE YEAR from the date of purchase against any defects in workmanship or materials.
